METMalaysia Weather Forecast Report

Forecast date(s): 2026-10-18

Report generated: 19 October 2026, 05:03 PM MYT

Source: METMalaysia General Forecast API

Executive Summary

This report summarises published forecasts for 2,065 locations across Malaysia. The average forecast daily maximum temperature is 32.92 °C, while the average forecast daily minimum temperature is 23.73 °C. The most frequently reported significant-weather category is Thunderstorms.

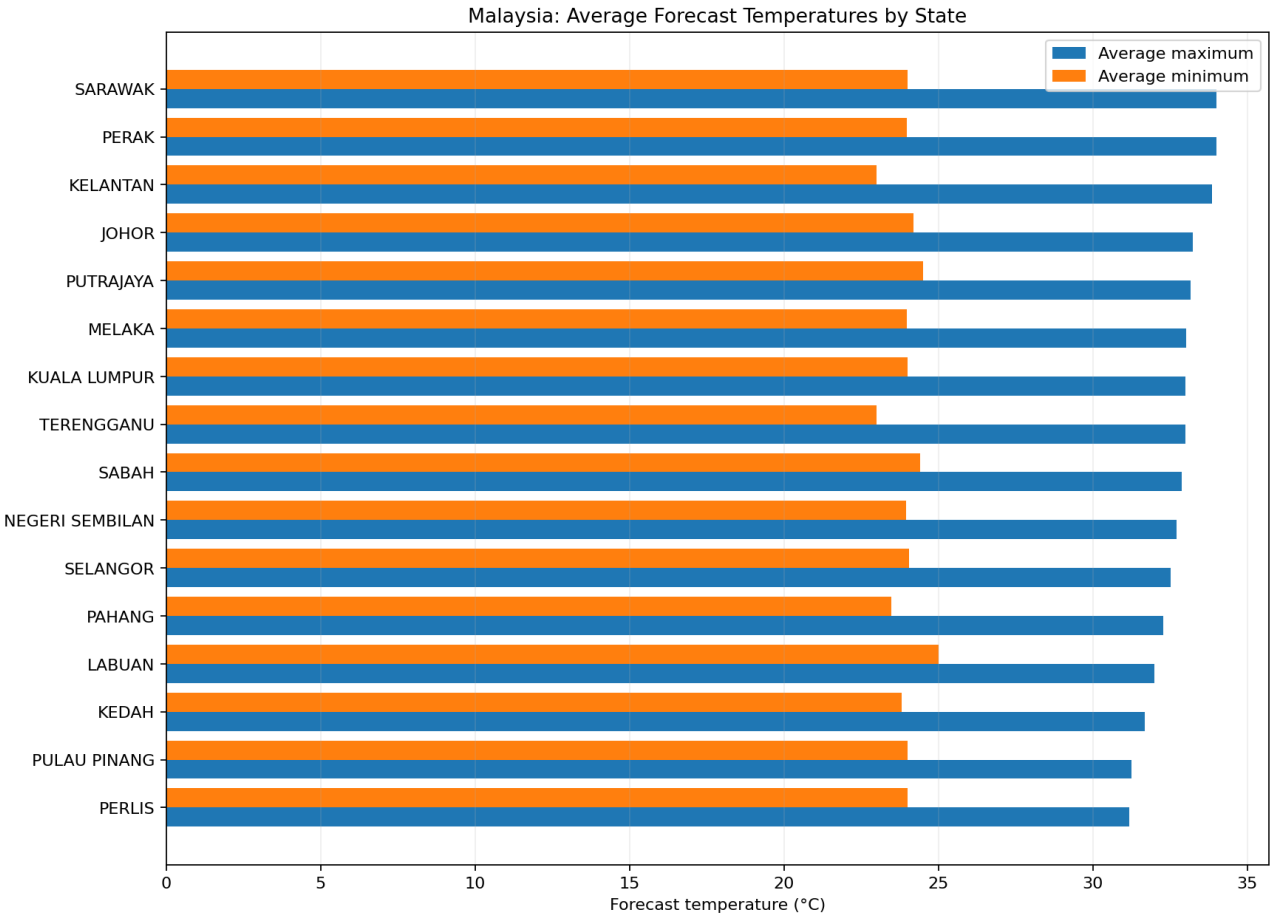

Geographic state mapping covers 1,980 of 2,065 forecast locations (95.88%). Locations without resolved state assignments remain included in national statistics.

National Forecast Overview

Indicator	Value
Forecast locations	2,065
Mapped locations	1,980
Geographic coverage	95.88%
Average maximum temperature	32.92 °C
Average minimum temperature	23.73 °C
Most frequent weather category	Thunderstorms

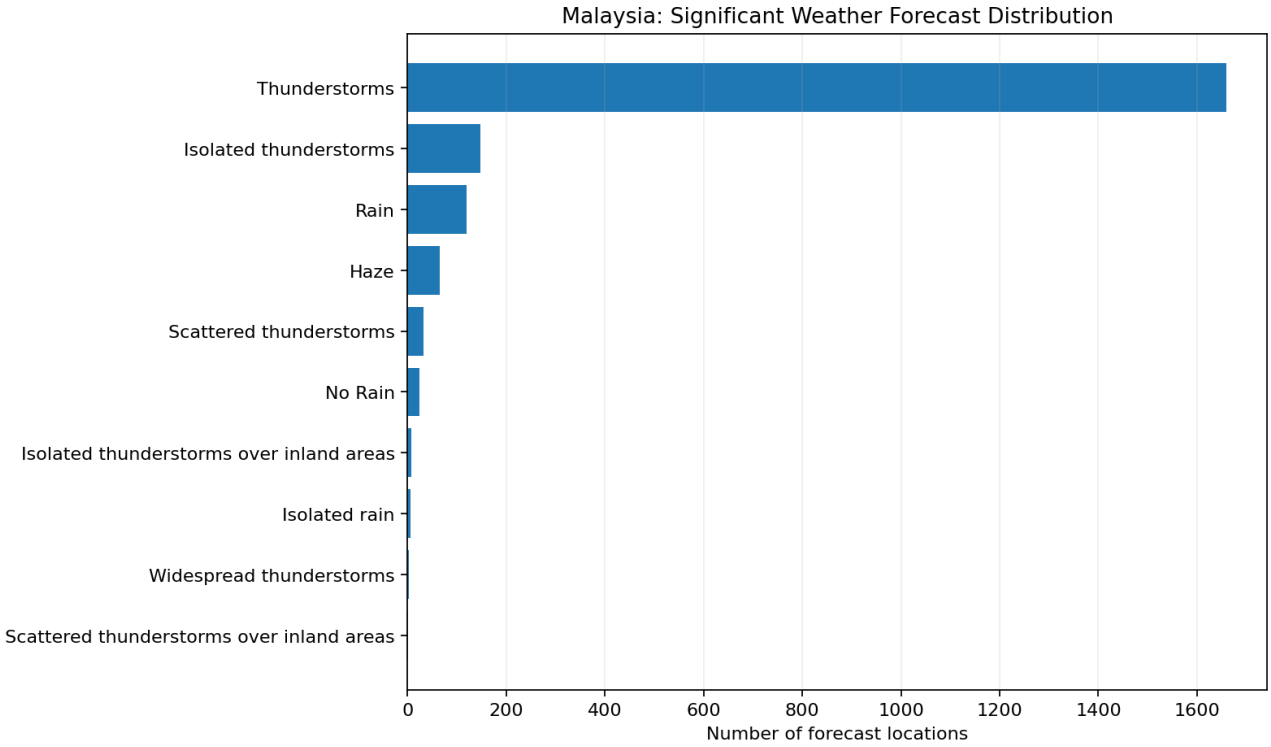

State-Level Temperature Comparison

State / Territory	Locations	Avg Max (°C)	Avg Min (°C)
JOHOR	156	33.24	24.19
KEDAH	248	31.67	23.80
KELANTAN	328	33.85	23.00
KUALA LUMPUR	28	33.00	24.00
LABUAN	2	32.00	25.00
MELAKA	119	33.03	23.98
NEGERI SEMBILAN	177	32.72	23.96
PAHANG	159	32.29	23.47
PERAK	195	34.00	23.98
PERLIS	28	31.18	24.00
PULAU PINANG	70	31.26	24.00
PUTRAJAYA	6	33.17	24.50
SABAH	32	32.88	24.41
SARAWAK	49	34.00	24.00
SELANGOR	254	32.53	24.06
TERENGGANU	129	32.99	23.00
Unmapped	85	33.62	23.78

Significant Weather Forecast Distribution

The following chart counts forecast locations by their published significant-weather category. These are forecast classifications, not observed weather events.

Geographic Mapping Coverage

Methodology

Forecast records were retrieved through the METMalaysia API, validated, transformed into location-level tables and aggregated for reporting.

Limitations

Forecast values are not observed temperatures. National and state temperature averages are unweighted across forecast locations. State assignments follow the METMalaysia location hierarchy and are not independently verified administrative boundaries. Unmapped locations are retained in national calculations. This report represents the saved forecast snapshot and is not a continuously updated live report.
